Rationales

▼ 1.1 — D

Choice D is the best answer. The study isn't definitive, but it says that Mimas's wobbly rotation could be explained by the hidden ocean.

Choice A is incorrect. This choice goes too far beyond the information in the text. Rhoden's team proposed that one moon of Saturn could have a liquid ocean beneath its surface, and that other moons should also be examined, but no one has confirmed anything. Choice B is incorrect. This choice conflicts with the text. Research has identified at least one sign—the unusual wobble in Mimas's rotation—that might be due to a hidden ocean beneath its surface. Choice C is incorrect. This choice doesn't reflect the text. The computer model studies "gravitational interactions," which seem to account for the wobbly rotation of Mimas.

▼ 1.2 — D

Choice D is correct. The text describes how Alspaugh's scrapbook is both a record of her life and a historical record of nineteenth-century textiles and dressmaking.

Choice A is incorrect. The text says that it was common for American women to keep scrapbooks of fabric pieces in the nineteenth century, and it says that Alspaugh was one of these women. However, it never says that other women were inspired by Alspaugh. Choice B is incorrect. This is too general and too strong. The text says that Alspaugh's scrapbook is a historical record of nineteenth-century textiles and dressmaking, but it never says that historians rely on such scrapbooks in general to understand how fashions changed throughout that time period. This choice also fails to even mention Alspaugh, who is the real focus of the text. Choice C is incorrect. The text does say this, but it's a detail—not the main idea. The text is mainly about one woman's scrapbook (Alspaugh's), and this choice doesn't even mention her.

▼ 1.3 — B

Choice B is the best answer because it presents a supposed fact about the Pledge of Allegiance that, as the text explains, has recently become uncertain. The text begins by explaining the long-held belief that the original author of the US Pledge of Allegiance was Francis Bellamy, who claimed to have written it in August 1892. The text then describes a historian's recent discovery of a newspaper article published several months before August 1892 that mentions students reciting the same pledge. The text concludes that this discovery suggests Bellamy may not have created the pledge after all. Thus, what has recently become uncertain is the identity of the person who first wrote the pledge.

Choice A is incorrect because the text doesn't address any changes made to the Pledge of Allegiance in the 1900s. The text focuses solely on the question of who originally authored the pledge in or before 1892 and doesn't mention any subsequent modifications to its wording. Choice C is incorrect. While the text does mention a historian's discovery of a newspaper article that described students reciting the pledge, it doesn't suggest that the pledge was published in its entirety within that article. Moreover, the text doesn't identify the newspaper by name or suggest the possibility of an earlier mention of the pledge in a different newspaper. Choice D is incorrect because the text doesn't mention which parts of the Pledge of Allegiance students preferred in 1892 or at any other time. The text only states that a newspaper article described students reciting the pledge, without providing any information about their preferences regarding different portions of it.

▼ 1.4 — A

Choice A is the best answer. The text lists complaints about the house made by the mother and father, but then it says that the children thought the house was a "Fairy Palace" and "Earthly Paradise."

Choice B is incorrect. The text states the opposite of this. It describes how the mother and father dislike the house and says the children think the house seems like paradise. Choice C is incorrect. This isn't what the text says. Only the children are said to admire the house; mother and father both complain about the house. Choice D is incorrect. The text states the opposite of this. It tells us the house was ugly and poorly built ("an architect's nightmare") and suggests the children were tired of London.

▼ 1.5 — A

Choice A is the best answer because it presents a statement about Veronica Waweru's thinking that is supported by the text. The text begins by discussing Waweru's discovery of evidence that ancient versions of the board game mancala had been played at a site in the Lewa Wildlife Conservancy. The evidence consisted of many rows of shallow pits carved into stone. The text goes on to state that some newer pits were carved on top of older pits, suggesting that people may have continued to play the game there over multiple generations, creating new pits over time. The text then explicitly states that the presence of newer pits carved on top of older pits was precisely what caused Waweru to think that mancala had been played at the site for a long time.

Choice B is incorrect. While the text does state that Waweru "noticed many rows of shallow pits carved into stone," this observation led her to believe that the pits could have been

used as game boards for ancient versions of mancala but did not specifically suggest to her that the game had been played at the site for a long time. The multiple rows of pits merely suggest that these pits functioned as part of a game board; they don't necessarily indicate how long the site had been used for that purpose. Rather, it was the fact that there appeared to be newer pits carved on top of older pits that led Waweru to think that mancala had been played at the site for a long time. Choice C is incorrect. Although the text states that Waweru found the pits at the Lewa Wildlife Conservancy, this isn't the reason the text gives for why she thought that mancala had been played at the site for a long time. The location of the discovery only provides information about where the game was played, not how long the game had been played there. Choice D is incorrect because the text doesn't mention any variation in the depth of the pits. The text only describes the pits collectively as shallow and doesn't indicate that the depth of the pits factored into Waweru's thinking about how long the site had been used for playing mancala.

▼ 1.6 — D

Choice D is the best answer because it most accurately states the main idea of the text. The text describes Mary's activities in an overgrown hidden garden, saying that she was "very much absorbed" and was "only becoming more pleased with her work every hour" rather than getting tired of it. She also thinks of garden activities as a "fascinating sort of play." Thus, the main idea of the text is that Mary feels very satisfied when taking care of the garden.

Choice A is incorrect because the text never makes any mention of Mary's chores. Choice B is incorrect because the text indicates that Mary finds pulling up weeds to be fascinating, not boring. Choice C is incorrect because Mary thinks of garden activities in and of themselves as play, not as something necessary to do to create a space to play.

▼ 1.7 — C

Choice C is the best answer because it gives the age for the fossil discovered by Wang and colleagues that is directly supported by the text. According to the text, Xin Wang and colleagues discovered a 164-million-year-old plant fossil. This plant fossil included a flower bud, which the researchers believe provides evidence that flowering plants emerged in the Jurassic period, which falls between 145 million and 201 million years ago.

Choice A is incorrect because the text states that Wang and colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 150 million years old. Although 150 million years ago would fall within the Jurassic period, according to the text it isn't the age of the discovered fossil. Choice B is incorrect because the text states that Wang and

colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 145 million years old. Although 145 million years ago would fall at the end of the Jurassic period, according to the text it isn't the age of the discovered fossil. Choice D is incorrect because the text states that Wang and colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 201 million years old. Although 201 million years ago would fall at the beginning of the Jurassic period, according to the text it isn't the age of the discovered fossil.

▼ 1.8 — B

Choice B is the best answer. The text states that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," all of which are important aspects of ancient life.

Choice A is incorrect. The text doesn't say anything about investigating if people's sense of smell has declined in recent centuries. It says that scents fade over time—not that people have gotten worse at smelling scents. Choice C is incorrect. The text says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," but it doesn't say anything about ancient scents being enjoyable to people today. Choice D is incorrect. The text doesn't say anything about developing new medicines. Rather, it says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine."

▼ 1.9 — B

Choice B is the best answer. The text describes a study about how giant honeybees use shimmering to defend against hornets, but not other predators. The researchers conclude that shimmering could be a specialized defense response to hornets.

Choice A is incorrect. The text says that giant honeybees don't appear to use shimmering against other, larger predators. However, it never suggests that researchers don't know which other defenses giant honeybees do use for those predators. Choice C is incorrect. The text says that hornets are one predator of giant honeybees, but it doesn't say that hornets are the main predator of giant honeybees. This choice also fails to mention "shimmering," which is a major focus of the text. Choice D is incorrect. The text only discusses the shimmering of giant honeybees—it doesn't discuss other insects' defense responses at all.

▼ 1.10 — D

Choice D is the best answer because it presents a description of how Zerviah Holme felt that is directly supported by the text. The text states that Holme "did not like to be interrupted" while reading Gibbon and that he considered interruptions to be "an insult." Furthermore, the text suggests that Gibbon is Holme's favorite author because, as the text states, "he was always reading Gibbon." Thus, Holme would have felt annoyed at having been interrupted when the letter was delivered.

Choice A is incorrect because the text doesn't suggest that Holme is relieved to receive the letter. Instead, the text states that Holme "just glanced indifferently at the letter," suggesting that the letter wasn't important to him. Choice B is incorrect because the text doesn't suggest that Holme is excited to receive the letter. Instead, the text states that Holme didn't put down his book to receive the letter and that he looked at the letter "indifferently" and at the postman "impatiently." This suggests that Holme isn't excited. Also, there is no mention that Holme knows who sent the letter. Choice C is incorrect because the text doesn't indicate that Holme is sad or that he wants to speak with the postman. Instead, the text describes Holme as looking "impatiently at the postman," which suggests that he wants the postman to leave.

▼ 1.11 — A

Choice A is the best answer because it most accurately states what is happening in the text. The narrator notes that Lutie thinks the street looks nice in the light of the sunset. The narrator goes on to describe what Lutie can see in the street: children playing ball or tag and girls skipping rope. Thus, what is happening in the text is that Lutie is observing the appearance of the street at a particular time of day and the events occurring on it.

Choice B is incorrect. Although Lutie is observing children playing games on her street, the text doesn't suggest that she is annoyed by the noise of the games. Instead, the text says that Lutie thinks the street looks nice in the light of the sunset. Choice C is incorrect. Although Lutie is observing children playing games on her street, the text doesn't suggest that she is puzzled by the rules of the games. Choice D is incorrect because there is no evidence in the text that Lutie doesn't want to interact with her neighbors or that she is in her apartment alone. All the text indicates about Lutie is that she is watching the events on the street and thinks the street looks nice in the light of the sunset.

▼ 1.12 — A

Choice A is the best answer because it presents an explanation about a helicopter that is directly supported by the text. The text states that Mars's atmosphere is much less dense

than Earth's, and as a result, the air on Mars doesn't provide the resistance required to support the blades of a helicopter built for Earth and to keep the helicopter aloft. In other words, a helicopter built for Earth can't fly on Mars because of the differences in the two planets' atmospheres.

Choice B is incorrect because instead of stating that the blades of helicopters built for Earth are too large to work on Mars, the text indicates that the helicopter built to fly on Mars actually has even longer blades than a helicopter built for Earth. Choice C is incorrect because the text never addresses the role of gravity on Mars or on Earth; instead, it focuses on atmospheric conditions. Choice D is incorrect because the text doesn't indicate that helicopters built for Earth are too small to operate in the conditions on Mars. In fact, the text states that the size of the helicopter built to fly on Mars is the same size as a helicopter built for Earth, even though it has longer blades that rotate faster.

▼ 1.13 — D

Choice D is the best answer because it presents a statement about what the narrator is doing that is directly supported by the text. According to the text, as the narrator walks across the stage to her piano, she recalls her teacher's advice to pretend that she is playing for only one person. The text indicates that this advice was intended to help manage any nerves related to performing. Moreover, the text implies that the narrator follows this advice by deciding to focus on her father sitting in the audience. Thus, the text supports the idea that as she walks across the stage, the narrator follows her teacher's advice about managing her nervousness.

Choice A is incorrect because the text doesn't indicate that the narrator is thinking about how playing the piano alone is different from playing the piano in a band. Rather, the narrator thinks about her teacher's advice to pretend that she is playing the piano for only one person to help ease her nervousness about performing. Choice B is incorrect because the text provides no indication that this is the first music festival that the narrator has performed in. Furthermore, the text indicates that the narrator is nervous, not excited, to play the piano at the festival. Choice C is incorrect because the text doesn't suggest that the narrator is remembering how hard she practiced for the performance. Rather, she is thinking about what her teacher told her to do to help ease her nerves about playing the piano in front of an audience.

▼ 1.14 — D

Choice D is the best answer because it most accurately describes what the narrator and Mario did while riding in the car. The text describes a car trip that the narrator is taking with her family. The text states that during the car ride, the narrator and Mario "played games" to see how many different license plates they could spot.

Choice A is incorrect because the text doesn't mention the narrator and Mario reading during the car ride and instead describes them playing games. Choice B is incorrect because the text doesn't mention the narrator and Mario singing songs during the car ride and instead describes them playing games. Choice C is incorrect because the text doesn't mention the narrator and Mario sleeping during the car ride and instead describes them playing games.

▼ 1.15 — C

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by establishing Ruth Asawa as an artist who worked in several art forms but emphasizes that she was interested in art for reasons other than her desire to create it. The text mentions two ways in which Asawa brought art to children through public schools: cofounding the Alvarado School Arts Workshop in 1968 and helping found a public arts high school in 1982. Thus, the main idea is that Asawa's interest in art education motivated her to establish arts programs for students in San Francisco.

Choice A is incorrect because the text doesn't mention Asawa inspiring other artists to share their work with students. While the text does note that the Alvarado School Arts Workshop brought works of art and artists into public schools, it doesn't state that Asawa motivated these artists. Choice B is incorrect because the text makes no comparison between local and national appreciation of Asawa's sculptures. While the text does mention that Asawa created unique tied-wire sculptures and was connected to San Francisco, it does not contrast her local and national critical receptions. Choice D is incorrect. Although the text emphasizes Asawa's educational initiatives, it doesn't state or imply that she abandoned her career as a sculptor to work as an art teacher. Instead, the text portrays her educational work as a complement to her career as a successful artist.

▼ 1.16 — D

Choice D is the best answer because it accurately describes an aspect of Chavela Vargas that the text indicates is unusual among ranchera artists. According to the text, Vargas differed from other ranchera singers by slowing the tempo of classic songs, which allowed her to express the emotional quality of the lyrics more fully.

Choice A is incorrect because the text states that Vargas possessed an unusually raspy voice for a ranchera singer, not a clear and polished voice. Choice B is incorrect because the text indicates that Vargas was known to perform songs written from a male point of view, not that she avoided such songs. Choice C is incorrect because nothing in the text suggests that Vargas disliked performing classic songs. Rather, it suggests that she found innovative ways of performing them to emphasize their emotional content, which seems to suggest an affinity for such songs, not dislike.

▼ 1.17 — A

Choice A is the best answer. The text discusses how the mass production of bicycles in the late nineteenth century allowed people to travel longer distances, live farther from their workplaces, visit neighboring towns, and participate in new activities and social clubs. All of these are new opportunities that were provided by the widespread adoption of the bicycle.

Choice B is incorrect. The text never says this. It does say that the bicycle was "affordable," and that the "freedom to travel longer distances quickly and comfortably" made the bicycle "popular," but it never says that the bicycle was more popular than any other way of traveling (like cars or trains or horses). Choice C is incorrect. This is a detail mentioned in the text, but not the main idea. Cycling clubs are only one of the new opportunities that arose from the popularity of the mass-produced bicycle. A "main idea" should capture more of the information in the text. Choice D is incorrect. The text never says this. It doesn't mention the safety of the mass-produced bicycle at all.

▼ 1.18 — D

Choice D is the best answer because it provides a detail about Elinor that is established in the text. The text indicates that although Elinor is "only nineteen," she gives good advice and exhibits such a high level of understanding and judgment that she serves as "the counsellor of her mother." Thus, Elinor is mature beyond her years.

Choice A is incorrect because it isn't supported by the text: although the text says that Elinor advises her mother and often counteracts her mother's impulses, there's no mention of Elinor arguing with her mother or failing to change her mother's mind. Choice B is incorrect because it isn't supported by the text: although the text mentions that Elinor has strong feelings, it doesn't indicate that she's excessively sensitive when it comes to family issues. Choice C is incorrect because it isn't supported by the text: there's no mention of what Elinor thinks about her mother and no suggestion that she thinks her mother is a bad role model.

Because she's described as having "an excellent heart," Elinor likely doesn't think ill of her mother.

▼ 1.19 — C

Choice C is the best answer. The text states that the narrator couldn't remember what his Radha Aunty looked like, so he went to look at the family photographs she was in.

Choice A is incorrect. There's no mention of any story that the narrator is writing. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in. Choice B is incorrect. The text doesn't mention how the narrator's father dressed. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in. Choice D is incorrect. The text doesn't mention any events shown in the photographs. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in.

▼ 1.20 — B

Choice B is the best answer because it describes a reason that Moejoh and team founded U-recycle Initiative Africa. The text mentions two reasons the initiative was founded: to teach young people about how they affect the environment and to teach them "why recycling is important." Thus, teaching the importance of recycling to young people accurately describes a motivation that the text cites as a reason for the initiative's founding.

Choice A is incorrect. Although art is mentioned in the text, there are no details about artists or whether they are being overlooked. Choice C is incorrect because the text is explicitly about young people and their relationship to the environment and recycling. There is no mention of adults or outdoor skills. Choice D is incorrect. Although the text discusses young people, which likely includes teenagers, there is no mention of starting businesses.

▼ 1.21 — C

Choice C is the best answer. The text describes how Miranda circulated, edited, and added footnotes to "Letter to the Spanish Americans," and it claims that the letter and its author would have "remained insignificant" if it weren't for Miranda's efforts.

Choice A is incorrect. The text only says that Viscardo wrote the letter and that Miranda edited it: it never suggests that the original authorship of the letter is up for debate. Choice B is incorrect. This contradicts the text. The text says that Miranda edited and footnoted the

letter, but it identifies Viscardo as the letter's author. It also never identifies certain arguments as more eloquent than others. Choice D is incorrect. This is outside the scope of the text. The paragraph describes Miranda's role in the creation and distribution of the letter, but it doesn't get into the effects of the letter on other people.

▼ 1.22 — C

Choice C is the best answer because it most accurately states how the narrator feels about being at summer camp. In the text, the narrator states that after arriving at the camp, he found it to be different than he'd expected and that as a result, he felt "scared, but also excited."

Choice A is incorrect. In the text, the narrator describes himself as "excited." Although excitement is a positive emotion, it isn't as intensely positive as feeling overjoyed is. Moreover, the narrator also notes that he felt "scared." In other words, his excitement (a positive emotion) is balanced with fear (a negative emotion). Given this mixture of positive and negative emotions, it would be inaccurate to characterize the narrator as overjoyed. Choice B is incorrect because in the text, the narrator describes himself as having felt both fear and excitement. Neither of these emotions can be thought of as peaceful and, in fact, are almost the opposite of a sense of peace. Choice D is incorrect because in the text, the narrator describes himself as both "scared" and "excited," not angry and jealous.

▼ 1.23 — B

Choice B is the best answer because it most effectively states the main idea of the text, which is that Heidi is delighted and fascinated by an image she sees in one of Grandmama's books. In the text, Heidi screams upon first seeing the picture of the green pasture. In another context, such a reaction might suggest fear, but here the reaction is followed by descriptions of an image that's peaceful rather than scary. The text goes on to describe Heidi's eyes as "glowing" and states that she "devoured the scene," suggesting that the image delights and fascinates her so much that she wants to examine every detail. Together, these descriptions suggest that Heidi is thrilled and intrigued by the image in the book.

Choice A is incorrect because there's nothing in the text to suggest that Heidi is upset before seeing the peaceful image of the green pasture. Before Heidi sees that image, the text describes her as "looking with wondering eyes at the splendid pictures" in the book, suggesting that Heidi is intrigued, not that she's unhappy. Choice C is incorrect. Although Heidi screams upon first seeing the image, the text's description of the image and Heidi's

other reactions to it suggest that she is screaming with delight, not fear. The text describes the images in the book as “splendid” and the particular image that causes her to scream as peaceful rather than frightening. It also describes Heidi’s eyes as “glowing” and states that she “devoured the scene,” suggesting that the image of the green pasture delights and fascinates her so much that she wants to examine every detail. Choice D is incorrect because it’s unclear from the text whether Heidi has ever seen a shepherd with his sheep before. The text merely suggests that she is delighted and fascinated by the image of the shepherd and his sheep.

▼ 1.24 — B

Choice B is the best answer. The text describes Favela’s approach to sculpture, and then describes the lowrider car that he depicted in 2017.

Choice A is incorrect. This isn’t what the text says. The Petersen Automotive Museum is located in Los Angeles, but Favela’s artwork isn’t a painting, and it doesn’t depict L.A. Choice C is incorrect. This isn’t what the text says. Favela makes sculptures similar to piñatas, not paintings of them. Choice D is incorrect. This isn’t what the text says. Jesse Valadez owned the lowrider car that Favela depicted in sculpture.

▼ 1.25 — A

Choice A is the best answer because it presents information about Gloria Richardson that is supported by the text. The text provides a number of details about Gloria’s involvement in efforts to promote racial equality, including that she was the leader of what became known as the Cambridge movement.

Choice B is incorrect because the text never indicates that Gloria Richardson led her daughter Donna’s high school. The text says only that Gloria was inspired by her daughter to become involved in efforts to promote racial equality. Choice C is incorrect because the text doesn’t mention protests related to environmental protections. Rather, the text discusses Gloria Richardson’s involvement in efforts to promote racial equality. Choice D is incorrect because the text doesn’t indicate that Gloria Richardson led a new business in Cambridge, Maryland. Rather, the text states that she led what became known as the Cambridge movement.

▼ 1.26 — B

Choice B is the best answer because it presents a statement about how Richard Wagner achieved moments of extremely high volume in his operas that is supported by the text. The

text states that European composers experimented with volume in their works by increasing the number of musicians in the orchestra and provides the example of Wagner, who "added more horns, trombones, and tubas to the orchestra." The text explains that by having more of these instruments playing at the same time, the overall volume of the orchestra could be dramatically increased at key moments in Wagner's operas.

Choice A is incorrect because the text never indicates that Wagner moved his operas indoors to achieve moments of extremely high volume, nor does it indicate that his operas were previously performed outdoors. The only technique discussed in the text for achieving extremely high volume is Wagner's addition of more instruments to create a bigger, louder orchestra. Choice C is incorrect because the text never says that Wagner built or used a specially designed concert hall to increase volume through echoes. The only technique discussed in the text is Wagner's addition of more instruments to create a bigger, louder orchestra. Choice D is incorrect because the text never mentions any special training for singers related to volume or singing for extended periods. The text's focus is entirely on the orchestra and how Wagner and other European composers used instruments to experiment with volume in their musical works.

▼ 1.27 — B

Choice B is the best answer. The last sentence states that the linocut process "supported her [Catlett's] aim to unite Black women through her art."

Choice A is incorrect. The text briefly describes the linocut printing process but doesn't discuss the availability of the materials used in the process. Choice C is incorrect. The text says that the linocut process "enabled Catlett's work to reach a wide audience," but that doesn't mean that linocuts made her "commercially successful." In other words, we don't know how much money she made off her linocuts—we only know that more people were able to see her work. Choice D is incorrect. The text says that Catlett depicted Black women in her linocuts, but not that she was one of the first Black artists to use linocut printing.

▼ 1.28 — C

Choice C is the best answer because it presents a conclusion about increasing entrepreneurship in early adulthood that can be reasonably inferred from the text. The text explains that Andrés Hincapié investigated why young adults are less likely than older adults to start businesses and found that lack of knowledge of practical aspects of starting a business is a barrier. The text then states that Hincapié found that providing relevant informational resources greatly helps address that problem. Offering young adults practical

information about how to start a business would be an example of providing relevant informational resources, so Hincapié would most likely say it is a promising way to increase early adult entrepreneurship.

Choice A is incorrect because creating social networks of young adults interested (but presumably inexperienced) in starting a business wouldn't involve a clear source of practical information for those young adults, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship. Choice B is incorrect because encouraging young people to brainstorm business ideas wouldn't involve a clear source of practical information for those young adults, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship. Choice D is incorrect because providing young adults with training opportunities at existing businesses would give those young people exposure to businesses that already exist but not necessarily information about how to start a business, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship.

▼ 1.29 — B

Choice B is the best answer because it most accurately states the main topic of the text. The text begins by noting that few animals are known to spit, and then it focuses on Clare Jacobs's January 2022 observation of a gray seal spitting water at a white-tailed eagle. The text explicitly notes that this behavior had never before been observed in seals, highlighting that this was a previously unseen behavior. The text concludes with biologist Sean Twiss's hypotheses about why the seal might have been spitting. Thus, the main topic is the observation of a previously unseen behavior (spitting) of gray seals.

Choice A is incorrect because while the text does mention bird-watcher Clare Jacobs making an observation in southern England, bird-watching itself is not the main topic. The reference to bird-watching is incidental to the central focus of the novel behavior of a gray seal spitting water at an eagle. Choice C is incorrect because the text only mentions a white-tailed eagle as the target of a seal's spitting behavior; it doesn't provide any information about how these eagles typically behave when defending territory or interacting with other predators. Choice D is incorrect because the text doesn't discuss differences between gray seals and white-tailed eagles. While both animals are mentioned, the text is focused on the seal's unusual spitting behavior rather than comparing the two animals in any way.

▼ 1.30 — B

Choice B is the best answer because it presents a statement about Dorian that is directly supported by the text. The narrator of the text says that when Dorian sees his portrait, “his cheeks flushed for a moment with pleasure” and “a look of joy came into his eyes.” The narrator goes on to say that Dorian looked at the portrait “in wonder” and presents him as being so entranced by the portrait that he doesn’t notice what Hallward is saying to him. All these details support the description of Dorian as being delighted by what he sees in the portrait.

Choice A is incorrect because Dorian isn’t depicted as interested in Hallward’s opinion of the portrait but rather as so enraptured by the painting that he’s hardly even aware of Hallward. Choice C is incorrect because the portrait of Dorian is the only painting that is mentioned in the text, so there’s no evidence that Dorian prefers portraits to other types of paintings. Although Dorian is depicted as delighted with this particular portrait, there’s no way of knowing from the text whether he likes portraits better than other kinds of paintings. Choice D is incorrect because nothing in the text suggests that Dorian is uncertain about Hallward’s talent. Instead, the text is focused on Dorian’s delight with the portrait.

▼ 1.31 — B

Choice B is the best answer because it most accurately states what feature of *Hevea brasiliensis* is helpful for the process of making rubber. According to the text, this tree species produces latex, which is used to make rubber, and its inner bark contains a "network of tubes" that, when cut, enables the latex to flow out. The text explicitly states that this feature of *Hevea brasiliensis* is "helpful for the process of making rubber."

Choice A is incorrect because the text doesn’t mention the quality of the rubber produced from the latex of *Hevea brasiliensis* or compare its quality to that of rubber produced from other sources. Choice C is incorrect because the text never discusses the climates in which *Hevea brasiliensis* grows. Moreover, the text mentions only one region where this tree is found: the Amazon rainforest. Choice D is incorrect. Because the text states that *Hevea brasiliensis* is the world’s "main source of natural rubber," it can be inferred that there is at least one other source. However, the text doesn’t specify whether that other source is also a tree species and, if so, whether that species grows in the Amazon rainforest.

▼ 1.32 — B

Choice B is the best answer because it presents a research question that is clearly addressed by Manzoor's study as described in the text. The text indicates that Manzoor surveyed customers and found that background music was linked to reduced enjoyment while shopping. Manzoor then explains this result in terms of the music interfering with customers' main goal (finishing their shopping as quickly as possible), speculating that background music might improve the experience of customers with different shopping goals. Throughout the text, the focus is on the relationship between background music and customers' shopping experience, suggesting that Manzoor's study was designed to answer how background music affects that experience.

Choice A is incorrect because the text doesn't mention the volume of background music or how much time customers spend in a store. Instead, the text focuses on whether background music is linked to customer enjoyment of the shopping experience. Choice C is incorrect because the text doesn't address how much money customers spend or compare in-store and online purchasing. Rather, the text discusses background music played during shopping, not music as a product to be purchased. Choice D is incorrect because the text doesn't discuss different genres of music or customers' preferences for particular genres. Instead, the text addresses background music in general and its link to customer enjoyment.

▼ 1.33 — C

Choice C is the best answer because it describes something that is true of Mother, as presented in the text. The text indicates that in addition to other activities, Mother writes stories for her children while they are at school and makes up "funny pieces of poetry" for certain occasions.

Choice A is incorrect because the text suggests that Mother prefers to spend her time with her children and doesn't sit at home hoping that ladies will visit her. Choice B is incorrect because the text says only that Mother makes up poetry for the children's birthdays, not that she likes birthdays more than other special occasions. Choice D is incorrect because the text doesn't suggest that Mother prefers reading to her children over the other activities she does with them, such as playing with them and writing stories and poems for them.

▼ 1.34 — D

Choice D is the best answer because it most accurately states the main idea of the text. The text begins by stating that Flanagan was chosen in 1935 to lead the Federal Theatre Project (FTP), which was part of a program created by President Franklin D. Roosevelt. The text then explains that as the director of the FTP, Flanagan created jobs for more than 12,500 theater

professionals and ensured that ticket prices stayed low so that many people could afford to experience theater for the first time. Thus, the main idea of the text is that as the FTP's director, Flanagan succeeded in creating many jobs and introducing people to theater.

Choice A is incorrect. The text does suggest that jobs provided by the FTP were intended mainly for theater professionals, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater. Choice B is incorrect. The text does state that President Roosevelt created the WPA to provide jobs for unemployed people, but this is supporting information, not the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, which was part of the WPA, and the text's main point is that Flanagan succeeded in creating many jobs and introducing people to theater. Choice C is incorrect. It's true that many people couldn't afford to buy theater tickets during the Great Depression, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater.

▼ 1.35 — B

Choice B is the best answer because it presents the most likely consequence if New had not begun using sewing machines. The text states that New gained new customers and that sewing machines allowed him to make bags more efficiently, or in less time than he could when sewing by hand. It's reasonable to conclude that if New hadn't reduced the time it took to make each bag by starting to use sewing machines, it would have been hard for him to keep up with the increased demand.

Choice A is incorrect because the text indicates that New added unique, handcrafted details to his bags before he started using sewing machines and continued to do so after he started using them. Choice C is incorrect because the text doesn't suggest that individually designing each bag would have been a consequence of not using sewing machines, since New was already designing unique details for each bag before he started using sewing machines and continued to do so after he started using them. Choice D is incorrect because the text indicates that people were already interested in New's bags before he started using sewing machines. Rather than allowing New to generate more interest in his bags, sewing machines helped New keep up with the interest that had already grown.

▼ 1.36 — D

Choice D is the best answer. The text describes a study assessing how children think of rewards and fairness and its results. It concludes that the children in the study may have thought that a teacher who counted out loud when giving rewards cared more about fairness than a teacher who did not count out loud.

Choice A is incorrect. The children in the study are described as being "four to six," and the text doesn't mention any differences among the different ages. Choice B is incorrect. The experiment wasn't about teaching math—rather, it was about how counting out loud affected the children's perception of fairness. Choice C is incorrect. The experiment doesn't focus on whether the children care about fairness, and the text never mentions the children's expectations of being rewarded.

▼ 1.37 — D

Choice D is the best answer. The text describes a study about how reef-building corals capture microplastics from ocean waters, which found that these corals are storing 20 million kilograms of microplastics in their skeletons and tissues.

Choice A is incorrect. While the researchers are studying "reef-building corals," the focus of their study isn't how the corals build the reefs. Rather, they're studying how corals may be storing microplastics from ocean waters. Choice B is incorrect. The text doesn't mention any unanswered questions about the impact of corals on ocean ecosystems—rather, the study assesses one interaction between corals and microplastics. Choice C is incorrect. The text does say this, but it's a detail—not the main idea. The main idea of the text is about the study that found that corals may be storing microplastics from ocean waters in their skeletons and tissues.

▼ 1.38 — D

Choice D is the best answer. The text describes the very low ceiling of the cave, making it impossible to photograph the very wide glyphs all at once.

Choice A is incorrect. The text doesn't say this. It never suggests that the cave was remote or difficult to access, just that the cave itself was difficult to photograph well. Choice B is incorrect. The text doesn't say this. The glyphs were so wide that they couldn't be photographed completely. Choice C is incorrect. The text states the opposite of this. The researchers "used a technique called photogrammetry to assemble numerous photos of the walls into a 3D model."

▼ 1.39 — A

Choice A is the best answer. The narrator is “embarrassed” about the route he took, which ends up leaving him lost and confused about how to get to his destination for the evening.

Choice B is incorrect. This choice doesn’t match the passage. The narrator is embarrassed, rather than fond, and he doesn’t describe the beauty of the place. Choice C is incorrect. This choice doesn’t match the passage. We don’t know from this excerpt whether or not the narrator has visited this part of New York multiple times. Choice D is incorrect. This choice doesn’t match the passage. The narrator doesn’t explain how he overcame being lost in this excerpt.

▼ 1.40 — B

Choice B is the best answer because it most accurately states the main idea of the text. The text states that researchers have used fossils to learn about the nervous systems of ancient arthropods. It then provides a specific example of researchers studying fossils of *Mollisonia symmetrica* and finding evidence of a nerve cord and possibly a synganglion (a brain-like mass of nerves). The text concludes by noting that researchers hope to discover more features of prehistoric arthropods’ nervous systems "as additional fossils are found." Thus, the main idea of the text is that fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

Choice A is incorrect because the text doesn’t compare the brains of hawk moths and brine shrimp. These animals are merely mentioned as examples of arthropods in the opening sentence, and the text doesn’t go on to discuss any similarities between their brains. Choice C is incorrect because the text discusses nervous systems, not spines, in ancient arthropods, and it doesn’t specifically mention findings about ancient hawk moths or brine shrimp. Choice D is incorrect. While the text concludes by noting that researchers aim to discover additional characteristics of prehistoric arthropods’ nervous systems as more fossils are uncovered, this statement doesn’t suggest that researchers need to focus on finding more fossils. Rather, it simply indicates that researchers expect to learn more about this topic as additional fossils are discovered. Moreover, the statement is just a detail that supports the main idea; it’s not the main idea itself.

▼ 1.41 — C

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by explaining that Kenyan writer Ngũgĩ wa Thiong’o had published four novels in English before he began writing in his native language, Gĩkũyũ, in the 1970s. The text then explains that fellow writers and critics were skeptical of this decision, warning that the

choice to publish in his native language, which the text implies isn't widely understood, would limit his readership. The text concludes by stating that despite those warnings, Ngũgĩ proceeded to publish several acclaimed novels in Gĩkũyũ that were translated into several languages, suggesting that Ngũgĩ's works in Gĩkũyũ achieved literary success in the forms of critical recognition and a wide international readership. Thus, the main idea is that although Ngũgĩ's decision to write in Gĩkũyũ was met with some skepticism, this choice didn't prevent him from achieving literary success.

Choice A is incorrect because it contradicts the description of Gĩkũyũ provided in the text. Rather than indicating that Gĩkũyũ is a widely understood language, as this choice claims, the text states that colleagues cautioned Ngũgĩ that writing in Gĩkũyũ instead of English "might make his works inaccessible outside his own community." Furthermore, the text contrasts the choice of Gĩkũyũ with another alternative to English, Kiswahili, which the text indicates is "a more practical choice" given that it is "widely spoken in Kenya and elsewhere in Africa." Choice B is incorrect because it contradicts information in the text. Although the text states that the novels Ngũgĩ published in Gĩkũyũ were later translated into other languages, the text explicitly states that Ngũgĩ had previously published four novels in English before he began writing in Gĩkũyũ in the 1970s. Thus, his first works were published in English, not Gĩkũyũ. Choice D is incorrect. The text doesn't address what motivated Ngũgĩ's choice to publish in his native Gĩkũyũ, and nothing in the text suggests that he intended for other authors to follow his example.

▼ 1.42 — B

Choice B is the best answer because it presents a statement about the two previously unknown penguin species that is supported by the text. According to the text, Alan Tennyson and colleagues studied fossil bones belonging to two previously unknown penguin species that are described as prehistoric, or ancient. The text goes on to say that one of the two species was considerably larger than the emperor penguin, which is currently the largest penguin in existence. Thus, the text indicates that the other species aren't in existence today, or that the two previously unknown penguin species are no longer living species.

Choice A is incorrect. Although the text states that Alan Tennyson is a paleontologist who studied the fossils of two previously unknown penguin species, it doesn't say whether these penguins are frequently studied by paleontologists. Choice C is incorrect because the text says that one of the two previously unknown penguin species was three times larger than the emperor penguin (a penguin alive today), not that they were both smaller than penguin

species that exist today. Choice D is incorrect because the text doesn't discuss whether the two previously unknown penguin species spent any time in water.

▼ 1.43 — D

Choice D is the best answer. The text metaphorically likens humans to animals in a zoo, suggesting that humans have dreams that they cannot fulfill because they are trapped.

Choice A is incorrect. The speaker says that the lion has an "untamed heart," but the speaker doesn't actually mention anything about humans taming wild animals or a lack of compassion. Choice B is incorrect. The speaker doesn't suggest that humans lack motivation. Rather, the speaker thinks that humans are "trapped" and prevented from achieving their dreams. Choice C is incorrect. The speaker doesn't mention anything about humans becoming frustrated or lacking self-control. Rather, the speaker thinks that humans are "trapped" and prevented from achieving their dreams.

▼ 1.44 — D

Choice D is the best answer because it presents the point about the magnetic field mapping that the text describes as surprising. The text indicates that a team of astronomers mapped the magnetic field of G47, a galactic bone in the Milky Way, and that the mapping "surprisingly" revealed "no clear pattern or direction" in the magnetic field. The text then adds that the researchers had thought the magnetic field would be as uniform as the magnetic fields of other galactic bones in the Milky Way are. In other words, the researchers were surprised that the mapping revealed a magnetic field that wasn't uniform.

Choice A is incorrect because the text doesn't indicate that the mapping surprisingly showed a weaker magnetic field than the researchers had expected. The text makes no mention of the magnetic field's strength, only its lack of a clear pattern or direction. Choice B is incorrect because the text doesn't indicate that the magnetic field mapping suggested to researchers that previous mappings were inaccurate. Although the text states that the mapping didn't show what researchers had expected based on their knowledge of other magnetic fields, there's no indication that G47's magnetic field had ever been mapped before. Choice C is incorrect because the text indicates that the researchers were surprised that the magnetic field was different from, not similar to, the magnetic fields of other galactic bones; the text states that because other galactic bones in the Milky Way are more uniform, the researchers had expected the magnetic field of G47 to be more uniform than it turned out to be.

▼ 1.45 — A

Choice A is the best answer because it most accurately states the main idea of the text. According to the text, many of Richard Hunt's sculptures "use broad forms rather than extreme accuracy"—in other words, they are more abstract than realistic. To illustrate Hunt's abstract approach, the text characterizes his sculpture of Arachne as "vaguely human" and his work in honor of Ida B. Wells as "using mainly flowing, curved pieces of metal that create stylized flame." Thus, the main idea is that Hunt often depicts the subjects of his sculptures using an unrealistic style.

Choice B is incorrect. Although the text indicates that one of Hunt's sculptures is made of steel and another of bronze, there is no mention of why he chose these materials. Choice C is incorrect because the text says nothing about how Hunt chose the subjects for his sculptures. Furthermore, of the two examples provided in the text, only Ida B. Wells is an important historical figure; Arachne is a "mythical character." Choice D is incorrect because the text says nothing about how Hunt's style changed over time. In fact, although the two examples of Hunt's work discussed in the text were created 65 years apart, they are both described as heavily stylized rather than realistic, which may suggest that some aspects of Hunt's style haven't changed over that time.

▼ 1.46 — D

Choice D is the best answer because it most accurately states the main idea of the text. The text indicates that Rosenswig, López-Torrijos, and colleagues concluded that there is a cultural link between the city of Izapa and the 41 smaller settlements they located around the city. According to the text, the researchers reached this conclusion because Izapa and the settlements are of the same age and configuration in that all have a pyramid to the north and a plaza to the south. Thus, the main idea of the text is that researchers have inferred that Izapa was related to the smaller settlements that surrounded it based in part on the similarity of their construction.

Choice A is incorrect. Although the text discusses a similarity between how structures in Izapa and nearby settlements are arranged, the text doesn't indicate that the arrangement in Izapa is based on those of the nearby settlements. Choice B is incorrect. Although the text mentions that residents of Izapa and its surrounding settlements may have performed the same cultural ceremonies, the text doesn't discuss the ceremonies' importance for the residents. Choice C is incorrect. Although the text describes findings about Izapa, it doesn't specify how much archaeologists have learned about Izapa over the years. Additionally, while

the text indicates that the discovery of the 41 smaller settlements surrounding Izapa was made in present-day Chiapas and thus may be of recent date, this is a detail in the text, not its main idea.

▼ 1.47 — D

Choice D is the best answer because it most accurately states the main idea of the text. After establishing that Buck views most people “as nothing,” the text explains that Buck won’t acknowledge people other than Thornton unless they appear friendly toward Thornton, and even then he’s only reluctantly accepting. Thus, the text focuses on the idea that Thornton has a special status in Buck’s mind, with Buck holding him in higher regard than other people.

Choice A is incorrect because the text conveys that Buck isn’t social with people other than Thornton but doesn’t address Buck’s life or temperament before he lived with Thornton. Choice B is incorrect because the text conveys that Buck doesn’t really care about people other than Thornton and is aloof toward them. However, there’s no indication that Buck mistrusts and avoids people generally; indeed, he accepts Thornton, who is a human. Choice C is incorrect because the text refers to random travelers praising and petting Buck and Thornton’s partners giving Buck favors, but there’s no indication that any of these people are Thornton’s friends or that they have a particular fondness for Buck.

▼ 1.48 — B

Choice B is the best answer because it presents a statement about how historians view *pachuca* style that is supported by the text. The text first describes the distinctive *pachuca* style of dress adopted by some Mexican American women during World War II, saying that some criticized it and asserted that women should dress traditionally. The text then goes on to contrast this position with that of historians, who "see things differently": according to these historians, the *pachuca* style showed a wish for freedom and self-expression, and it acted as a kind of rebellion against what society expected of women at the time. Therefore, according to the text, historians think that the *pachuca* style was a way for Mexican women to express themselves and resist strict social expectations.

Choice A is incorrect because the text explicitly describes the *pachuca* style as a distinctive look adopted during the World War II era. It does not indicate that the *pachuca* style influences fashion in the United States in the present day. Choice C is incorrect because the text does not indicate that Mexican American women wore the *pachuca* style to show support for the United States during World War II; rather, the style was a means of self-

expression and rebellion against social expectations. Choice D is incorrect because the text does not compare the *pachuca* style to other fashion trends: the *pachuca* style is the only style mentioned.

▼ 1.49 — B

Choice B is the best answer because it most accurately states the main topic of the text. The text begins by stating that archaeologists in Norway have discovered what may be the oldest known runestone (a stone with an inscription in the runic alphabets used in the region in ancient times). According to the text, the object was created between 1 and 250 CE. The text then mentions a researcher who comments on the runestone's significance to the study of runic alphabets. Thus, the main focus throughout the text is a runestone found in Norway.

Choice A is incorrect because the text mentions the Iron Age only to indicate the era when the runestone was created and when runic alphabets were in use; there's no discussion of battles during this era. Choice C is incorrect because the text mentions the carbon dating method just once and does so only to indicate the age of the runestone; moreover, the text doesn't suggest that this method is new. Choice D is incorrect. Although the text indicates that Zilmer is a runologist, or a scholar of runestones, it does so in a single sentence, so Zilmer's scholarly interests are therefore not a primary focus of the text.

▼ 1.50 — A

Choice A is the best answer because it presents information about Maya civilization that is supported by the text. The text states that the writing system used in the Maya kingdoms had a symbol for the number zero. It goes on to say that at the time of the zero symbol's earliest example, more than 2,000 years ago, almost no other writing systems in the world featured such a symbol. The text also points out that some historians suggest that Maya mathematicians inherited the use of zero from the Olmec civilization, which existed in the same area as the Maya civilization at an earlier date. Thus, according to the text, some historians suggest that the Maya civilization acquired the use of zero from the Olmec civilization.

Choice B is incorrect because although the text mentions present-day historians and Maya mathematicians, it does not say anything about how much the Maya civilization respected its historians and mathematicians. Choice C is incorrect because the text does not indicate that the Maya civilization treated its use of the zero symbol, or any other intellectual achievements, as secrets to be kept from other civilizations. Choice D is incorrect because although the text mentions historians who suggest that the writing system of the Maya

civilization inherited some features from the earlier Olmec civilization, the text does not describe any attempts of Maya civilization to introduce its writing system to other civilizations.

▼ 1.51 — B

Choice B is the best answer because it presents a question that the text is attempting to answer: why has the pronoun "y'all" become more widely used in the US? The text begins by explaining where and how the plural pronoun "y'all" originated and then goes on to state that its use has been rising in popularity, even in areas outside of its place of origin. The text then attributes this rise in popularity to the fact that many varieties of English do not have a pronoun to address more than one person, and thus "you" must function as both a singular and plural pronoun.

Choice A is incorrect because while the text states that "y'all" is used as a plural of "you" in English, it does not discuss other plural forms of the word. Choice C is incorrect because while the text discusses the general origins of the pronoun "y'all," it does not state when the use of the pronoun was first recorded in the English language. Choice D is incorrect because though the text addresses the use of the pronoun "y'all" within English-speaking communities in the US, it does not address its use outside of that geographic area.

▼ 1.52 — D

Choice D is the best answer because it presents a statement about critics' skepticism of Bosco Verticale that is supported by the text. The text states that Boeri's design for Bosco Verticale features hundreds of trees on balconies and is intended to serve as a model for promoting urban biodiversity. But the text goes on to state that some critics believe that it is too early to determine if the trees planted on Bosco Verticale can thrive there. Therefore, according to the text, critics are skeptical of the concept behind Bosco Verticale because it is unclear whether Bosco Verticale can support the plant life included in its design.

Choice A is incorrect. Although the text states that one of Boeri's goals was for Bosco Verticale to serve as a model for promoting biodiversity in architecture, which suggests that Boeri would likely support the idea of reproducing the same concept in other locations, the text does not discuss whether it is feasible to adapt the design to locations other than Milan. Instead, the text describes critics' concerns that the plant life that currently exists on Bosco Verticale might not thrive in its current setting. Choice B is incorrect. Although the text states that one of Boeri's goals in creating Bosco Verticale was to promote biodiversity, which implies a goal of including varied plant life in the design, it does not mention whether

the hundreds of trees that were planted on its balconies failed to meet this goal. Rather, the text states that some critics are concerned that the trees on Bosco Verticale's balconies may not thrive in this setting. Choice C is incorrect because the text does not mention how Bosco Verticale was constructed, let alone how environmentally destructive its construction may have been relative to the construction of more conventional buildings.

▼ 1.53 — A

Choice A is the best answer because it most accurately describes Gibson's approach to art. As the text explains, Gibson, who is Cherokee and Choctaw, transforms punching bags into art pieces by applying (or attaching) to them beadwork and elements of Native dressmaking, including leather fringe and the jingles of the jingle dress. The text goes on to say that in most Native communities, the art forms of beadwork and dressmaking are traditionally practiced by women. Therefore, Gibson's approach to art consists of creating original works by drawing from traditional Native art forms.

Choice B is incorrect. Because Gibson incorporates Native art forms into his own original artwork, it can be inferred that he has been influenced by other Native artists, but the text never suggests that non-Native artists have influenced him. Choice C is incorrect because the text doesn't indicate that Gibson designs dresses influenced by boxing but instead that he turns punching bags, which are used in boxing, into works of art by applying elements of Native dressmaking to them. Choice D is incorrect. Although Gibson does incorporate beadwork into his art, the text never mentions the colors or patterns that he uses or suggests that his art defies the expectations that people might have about color and pattern in beadwork.

▼ 1.54 — A

Choice A is the best answer because it most accurately states the main idea of the text. According to the text, Eugene Wigner hypothesized that a crystal could exist that would be composed of electrons and have a honeycomb-like shape. The text goes on to say that the existence of the Wigner crystal remained unconfirmed until Feng Wang and colleagues were able to make an impression of one using two semiconductors and an ultrathin sheet of graphene. Thus, the main idea is that researchers have obtained the most definitive evidence to date of the existence of the Wigner crystal.

Choice B is incorrect because the text focuses on one kind of crystal—the Wigner crystal—and doesn't discuss crystalline structures in general. And although the text conveys that Wang and colleagues figured out a way to capture an image of a Wigner crystal, it doesn't

address the idea of applying this approach to other types of crystals. Choice C is incorrect because the text describes in general the process Wang and colleagues followed to obtain an impression of the Wigner crystal; it doesn't address the relative importance of each component in that process. Choice D is incorrect because the text doesn't state that researchers had a hard time getting an impression of the Wigner crystal because of its honeycomb structure. Nothing in the text indicates why it took so long to prove the existence of this crystal or take an impression of it.

▼ 1.55 — D

Choice D is the best answer because it most accurately describes what is notable about Schmidt's behavior. According to the text, when the narrator's first wife admits she doesn't find art particularly compelling, Schmidt responds by wincing, sighing dramatically, and abruptly leaving dinner with an obviously false excuse about a remembered appointment. The narrator makes it clear that there is no actual appointment and that the excuse is merely a pretense. Through these actions—the physical reactions of wincing and sighing, followed by the transparent excuse to leave—Schmidt clearly communicates his disapproval of the wife without directly stating his feelings about her.

Choice A is incorrect because the text provides no evidence that Schmidt's theatrical behavior—wincing, sighing dramatically, and abruptly leaving dinner—is unique to situations involving the narrator and his first wife. The text describes only one interaction involving Schmidt, so there's no basis for determining whether his dramatic reactions are typical of him in all situations or limited to this particular social context. Choice B is incorrect because nothing in the text suggests that Schmidt is typically mindful of his schedule or that forgetting appointments would be uncharacteristic of him. Rather, the text makes it clear that Schmidt hasn't actually forgotten an appointment at all—the narrator indicates that Schmidt's reason for leaving is an obvious fabrication, not a genuine instance of absentmindedness. Choice C is incorrect because the text doesn't mention any previous disagreement between Schmidt and the narrator's first wife about a particular painting or any other topic. The text presents what appears to be a spontaneous reaction by Schmidt to the wife's statement about not finding art compelling, not the continuation of an earlier conversation or dispute.

▼ 1.56 — A

Choice A is the best answer. The text says that the impact of photography on the portrait miniature might be "overstated," as some records show a decrease in the number of portrait

miniatures *before* the invention of photography. From this, we can conclude that factors *other* than the rise of photography may be more directly responsible for the portrait miniature's decline.

Choice B is incorrect. The text never discusses the "artistic merit" of either art form. Choice C is incorrect. The text never suggests that the portrait miniature was popular for longer than historians thought—if anything, it suggests that the portrait miniature started losing its popularity *earlier* than historians thought. Choice D is incorrect. The text never suggests that portrait painters shifted to become photographers.

▼ 1.57 — A

Choice A is the best answer because it presents an explanation that is directly stated in the text for why ecologists are worried about Pando. The text states that Pando is a colony of about 47,000 quaking aspen trees that represents one of the largest organisms on Earth. According to the text, ecologists are worried that Pando's growth is declining, partly because animals are feeding on the trees. In other words, the ecologists are worried that Pando isn't growing at the same rate it used to.

Choice B is incorrect. Rather than indicating that Pando isn't producing young trees anymore, the text reveals that Pando is indeed producing young trees, stating that those trees can be protected from grazing deer by strong fences. Choice C is incorrect because the text states that fences can be used to prevent deer from eating Pando's young trees, not that Pando itself can't grow in new areas because it's blocked by fences. Choice D is incorrect because the text offers no evidence that Pando's root system is incapable of supporting new trees or is otherwise a cause of worry for ecologists.

▼ 1.58 — B

Choice B is the best answer because it most accurately states the main idea of the text. The first sentence of the text introduces the prediction that the structures of birds' feathers vary with habitat temperature and notes that this prediction hadn't been tested in mountain environments. The rest of the text focuses on a study by Barve, an ornithologist. The text indicates that Barve studied feathers of 249 songbird species in habitats at different elevations—and, therefore, different temperatures (as the text establishes that elevation affects temperature)—in the Himalayan Mountains. The text then explains that Barve found that compared to feathers of low-elevation species, feathers of high-elevation species have a greater proportion of warming sections and are of a length that provides more insulation—in other words, feather structure varies with elevation-driven temperature differences. Thus,

the main idea of the text is that Barve found an association between habitat temperature and feather structure among Himalayan songbirds and that this finding supports a general prediction that hadn't previously been tested in mountain environments.

Choice A is incorrect because the text specifically focuses on Barve's finding of a relationship between feather structure and elevation—which corresponds to temperature differences—and not on the broader claim that some birds have feathers better suited to regulating body temperature than others, without reference to a consistent pattern. Moreover, Barve's finding supports the prediction presented in the text (that feather structures vary with habitat temperature), and there's no indication that it contradicts any other predictions. Choice C is incorrect because the text doesn't indicate that Barve found that songbird species have adapted to their environment by growing feathers without flat and smooth sections; his finding of different proportions of such sections in feathers depending on elevation suggests that they do have flat and smooth sections. Moreover, Barve's finding supports the prediction presented in the text (that feather structures vary with habitat temperature), and there's no indication that it complicates any other earlier hypothesis. Choice D is incorrect because the text doesn't mention a comparison of the effects of feather structure and feather length; in fact, the text suggests that length is part of feather structure, since Barve's finding concerning structure addresses proportions of warming downy sections and insulation-providing length. Moreover, the text doesn't refer to an established belief, presenting instead a prediction that hadn't been tested in mountain environments before Barve conducted his study.

▼ 1.59 — B

Choice B is the best answer because it presents a statement about Altınışık et al.'s finding that is supported by the text. The text notes that tool similarities across Neolithic settlements could be attributed to imitative behavior or trade. However, Altınışık et al. found evidence of genetic affinity (that is, genetic relatedness) among the populations of these settlements. Genetic relatedness among populations with similar tools raises an alternative possibility: the tool similarities may have emerged through population blending rather than through imitation or trade alone. Thus, the finding raises the possibility that tool design similarities resulted from population blending.

Choice A is incorrect because the text doesn't address the timing or direction of migration between settlements. Although lesser genetic affinity with Central Zagros could reflect various historical patterns, the text presents genetic relatedness as evidence of population intermixing, not as evidence about when people or tools arrived at particular locations.

Choice C is incorrect because the text doesn't indicate that tools originated specifically at Çayönü Tepesi or that other settlements imitated its designs. Although the text notes that genetic affinity with Central Zagros was found "to a lesser extent," this describes degrees of genetic relatedness, not the frequency of tool imitation. Instead, the text presents tool similarities as a shared phenomenon across settlements. Choice D is incorrect because the text doesn't discuss a lack of cultural similarities among Neolithic peoples in Southwest Asia. Rather, the text focuses solely on tool similarities and genetic affinity without addressing other cultural parallels or differences.

▼ 1.60 — D

Choice D is the best answer. The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill actually wanted to avoid them.

Choice A is incorrect. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them. Choice B is incorrect. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them. Choice C is incorrect. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them.

▼ 1.61 — C

Choice C is the best answer because it most accurately describes the main idea of the text: a person appreciates the extensive time he passed in the company of a man he deeply admired. The speaker says that he spent "years" (a long period of time) in the company of a "truly great man" with "a natural genius for invention." These phrases indicate the speaker's feelings of admiration.

Choice A is incorrect because though the text indicates that the speaker feels professional admiration for the "truly great man," the text does not indicate that the speaker feels love for him; nor does the text indicate that the speaker's humility, absurdity, and slovenly nature proved to be an obstacle to this professional relationship. Choice B is incorrect because though the speaker describes himself as humble, the text does not indicate that he is

exceptionally talented; nor does the text indicate that the "truly great man" professes humility or is concerned with whether he intimidates others. Choice D is incorrect because the text does not indicate how either the speaker or the "truly great man" express their ideas.

▼ 1.62 — A

Choice A is the best answer because it most accurately states the main idea of the text. The text explains that fashion retailers face challenges in forecasting product demand due to rapidly changing tastes and lengthy manufacturing times. It then presents research by Fu and Fisher showing that combining retailers' own data with social media information significantly improves forecast accuracy. The text concludes by noting that better predictions help retailers meet demand without becoming overstocked. Thus, the main idea is that using multiple data sources (retailers' own data combined with social media information) can enhance fashion retailers' ability to anticipate demand.

Choice B is incorrect because the text doesn't claim that social media is revolutionizing, or fundamentally changing, how sellers and researchers view the fashion industry. The text never addresses the way the fashion industry is viewed; rather, it discusses a practical approach sellers in the industry can take to better match production with demand. Choice C is incorrect. Although avoiding overstocking is mentioned as a benefit of an approach that can help fashion sellers better predict demand, the text doesn't focus on overstocking or characterize it as the main concern of sellers. Rather, the text is focused on discussing the approach itself. Choice D is incorrect because the text suggests that fashion sellers encounter obstacles when using their own data to try to forecast demand as tastes and styles change; the text focuses on the idea that instead of using their own data alone, retailers should combine their own data with social media information to more accurately forecast demand.

▼ 1.63 — A

Choice A is the best answer because it accurately states the main idea of the text. The text focuses on formations of parallel ice ridges on Jupiter's moon Europa that are said to be formed by the same mechanism that formed a parallel set of ridges on Greenland's ice sheet. The text indicates that in Greenland, water on the surface seeps to the lower portion of the ice sheet, resulting in uplift that creates the ridges, and it states that although Europa lacks liquid water on its surface, the same process could be driven by an ocean below Europa's surface. In other words, the main idea of the text is that parallel ridges in the ice

on Europa and Greenland are likely caused by similar processes even though in Greenland the process begins with liquid water on the surface while Europa lacks liquid water on the surface.

Choice B is incorrect because the text states outright that the ridges on Europa are parallel and furthermore refers to Greenland's ridges as "strikingly similar" to those on Europa. Choice C is incorrect because the text makes no mention of when any of the ice ridges formed, either separately or relative to one another. Choice D is incorrect because the text does not indicate any uncertainty about the reason for the ice ridges on Europa and, in fact, clearly states that researchers now claim to know the mechanism that created the ridges.

▼ 1.64 — D

Choice D is the best answer because it most accurately states the main idea of the text. According to the text, Gross and Altman's book is a "valuable resource" because it's a "complete, uncensored, unauthorized oral history" that features accounts from people involved with "every *Star Trek* television series and film" made. However, the text also points out an inherent shortcoming of the oral history approach used by the book's creators: the lack of an authorial voice that could unify the many accounts into a coherent narrative. Thus, the text's main idea is that while the book's attempt at presenting a comprehensive oral history of the *Star Trek* franchise is a worthwhile one, the approach the creators selected has an important limitation.

Choice A is incorrect. While the goal of the book's creators (providing a comprehensive history of the *Star Trek* franchise) could be described as lofty, the text's criticism of the book is focused on the shortcomings of the oral history form, not on events in the *Star Trek* franchise that were not reflected in the book. Choice B is incorrect because the text doesn't suggest that the book includes more accounts from people involved with television shows than with films. In fact, the text explicitly states that the book includes accounts from people involved with "every *Star Trek* television series and film" ever made. Choice C is incorrect because the text doesn't indicate that many people involved with the *Star Trek* franchise failed to participate in the book's oral history project. The only mention of the scope of participation states that the book includes accounts "from cast and crew members of every *Star Trek* television series and film to date." This information implies a high level of participation from relevant individuals, not a lack of participation.

▼ 1.65 — C

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by stating that the Black Pearl orchestra performs classical music, and then goes on to explain that the orchestra offers an iConduct! program. According to the text, this program offers community members the opportunity to learn some basics about conducting and then apply what they learn by conducting the orchestra themselves. Thus, the main idea of the text is that community members can both listen to and participate in a classical music performance.

Choice A is incorrect. Although the text states that the Black Pearl orchestra is based in Philadelphia, it doesn't indicate that most of the music it plays was composed by Philadelphians. Choice B is incorrect. Although the text does state that Johnson founded the Black Pearl orchestra, this is just a detail and not the main focus of the text. Moreover, while the text does say that the orchestra sometimes plays music by Montgomery, it doesn't assert that the orchestra was founded solely for the purpose of performing Montgomery's work. Choice D is incorrect. Although the text explains that community members are invited to conduct the Black Pearl orchestra after participating in the iConduct! program, the text doesn't indicate that Johnson allows community members to do this for the specific purpose of showing how difficult the task is.

▼ 1.66 — D

Choice D is the best answer because it most accurately states the main idea of the text. The text indicates that archaeologist Mª Ángeles Medina-Alcaide and her team used replicas of Paleolithic light sources to understand how Paleolithic artists moved through dark caves. The researchers learned, for example, that torches were more helpful for moving through caves than animal-fat lamps were. Thus, the main idea of the text is that Medina-Alcaide and her team tested Paleolithic light sources and learned some details about how Paleolithic artists traveled within dark caves.

Choice A is incorrect because the text doesn't address the usefulness of fireplaces for Paleolithic cave artists; it only mentions fireplaces briefly as one of the three lighting methods the researchers tested. Choice B is incorrect because the text doesn't discuss how often Paleolithic cave artists used each kind of light source tested. Although the text does compare animal-fat lamps with another lighting method, the point of that comparison is that animal-fat lamps were less useful than torches when walking, not that one method was used more often than another. Choice C is incorrect because the text doesn't discuss either how difficult it was for Medina-Alcaide and her team to replicate light sources or how the team

felt about drawing conclusions from their study. Instead, the text reveals that the team was able to conclude that each light source likely had a distinct purpose.

▼ 1.67 — A

Choice A is the best answer. A "particularly warm summer" revealed the sandal, and centuries of ice kept it "well preserved."

Choice B is incorrect. This choice doesn't reflect the information in the text. The sandal is similar to Roman sandals, but there is no indication that it was a result of Roman influence. Choice C is incorrect. The text doesn't support this choice. We don't have enough information to know whether or not archaeologists would have found the sandal without people like the treasure-hunting mountaineer. Choice D is incorrect. The text says the opposite of this choice. The sandal was preserved by the ice for centuries.

▼ 1.68 — C

Choice C is the best answer. The text says that the cerebellum has long been thought to regulate motor functioning, but new research shows that it may also have other functions—including regulating emotion and social behavior and some connection to motivation and rewards processing.

Choice A is incorrect. The VTA is described as "a center for motivation and reward processing," and the discovery of the pathway between the VTA and the cerebellum supports the theory that the cerebellum is involved in functions other than motor coordination. Choice B is incorrect. The text says that recent research has identified this pathway, but it doesn't discuss any previous "widely accepted claims" about the pathway's function. The "widespread acknowledgement" mentioned early in the passage is about the cerebellum alone, not its connection to the VTA. Choice D is incorrect. The text never discusses any technological limitations or any new technologies.

▼ 1.69 — A

Choice A is the best answer. The text first describes hagfish slime and its properties, then it transitions to talking about the possibilities of using lab-made equivalents to use in eco-friendly fabrics.

Choice B is incorrect. The text says the opposite of this choice. The researchers are developing an alternative to petroleum-based fabric. Choice C is incorrect. This choice is too narrow to be the main point of the text. Only one line describes how farming would be

“potentially harmful” to the hagfish. Choice D is incorrect. This choice isn’t supported by the text. We don’t know from the text whether being jawless makes the hagfish more vulnerable.
